Abstract (en)  
The LED-based lamp is installable in a vehicle signaling light having a lamp-holder (26, 28, 30) suited for lamps with roto-translatory coupling and provided with contact means (38, 40, 42) connected to the electric supply line of the vehicle. The LED-based lamp comprises a mount (46, 146) shaped for coupling with the lamp-holder (26, 28, 30) and provided with at least one first pair of contact members (54a, 54b) connected to respective contact surfaces (47, 58) arranged to engage said contact means (38, 40, 42) of the lamp-holder, and a LED-based illuminator (52, 252, 352, 452). The latter comprises a LED-bearing board (60) supporting a plurality of lighting LEDs (62) connected to a second pair of contact members (64a, 64b) engageable with friction fit with said first contact members (54a, 54b) for removably connecting the illuminator to the mount.
