Abstract (en)
The present invention relates on the one hand to a lighting apparatus comprising a gas discharge lamp (1) which is preferably arranged in the apparatus so as to be in an approximately vertical position when the lighting apparatus is placed in the use position, the apparatus being provided in order to produce a batwing light distribution and comprising at least two separately orientable reflectors (2), (3) to reflect the light emanating from this lamp (1). This apparatus allows production of an effective, energy-efficient and flexible lighting installation which is particularly suitable for lighting an aisle between shelves in a shop layout, this lighting accentuating the products on the shelves. On the other hand, the present invention also relates to a shop layout comprising a number of lighting apparatuses according to the present invention which are fastened above an aisle between shelves, each lighting apparatus comprising, at the sides of the gas discharge lamp that face the shelves, a respective separately orientable reflector (2), (3).
