Abstract (en)
[origin: WO2007033712A1] The invention relates to a dimpled sheet (1), in particular for building purposes and preferably for use as a protective sheet for foundation walls or as a drainage sheet, having a flat region (2) and a plurality of dimples which project over the flat region (2) and which comprise a dimple casing (4) and, if appropriate, a dimple cover (5), and to a method for producing such a dimpled sheet. To make it possible for the dimpled sheet to be produced in a simple and cost-effective manner while ensuring a high degree of loadability, provision is made according to the invention for at least one dimple (3) to be provided in its upper dimple region (8) with a bead projecting over a directly adjacent region and/or for a secondary material to have a yield point which is greater than the yield point of the main raw material in the lower dimple region (9) or in the flat region (2), thereby producing a region with an increased load-bearing capacity.
