Abstract (en)
[origin: DE202005014377U1] A refrigerator swing-door (1) is operated by pulling a handle (8) with a mechanism releasing a spring-operated push-mechanism that supports the door opening action. The handle (8) is connected to the free side (6) of the door by an L-shaped lever-flange (9) and operates in the pitch axis (15). The lever-flange projects beyond and the handle moves (19) clear of the door front face.
