Abstract (en)  
[origin: DE202005014379U1] An opening limiting body (41) attached to a refrigerator door has an element (44) that abuts the door carrying arm (10) at a point beyond which the door would be opened too far. A door for a refrigerator comprises a door plate (2) and a hinge for hanging the door on the refrigerator body (1). The hinge is composed of a hinge pin (22) which turnably protrudes into a hinge casing (16) and which is secured to the door plate via a carrying arm (10). The drawing shows a section through the door and hinge in the closed state.
