Abstract (en)
[origin: WO2007031229A1] The invention relates to a heat exchanger with at least two plate-shaped flow ducts which are in parallel to one another and at a distance from one another and have a flow connection through at least one connecting duct (8) which spans the distance. It is proposed that the at least one connecting duct (8) be formed by two self-centring tube connectors (4, 6) which can be plugged one into the other.
