Abstract (en)

[origin: WO2007028630A1] The invention relates to a driver assistance device for a vehicle and a method for visualising the environment of the vehicle. Said driver assistance device is associated with two sensors for detecting the environment of the vehicle. The sensors have a different resolution and/or the driver assistance device is associated with a display device. Said display device is arranged in the region of the front disk in order to restrict analogic contact on the display which represents attentiveness information.
