Abstract (en)

[origin: US8122625B2] In order to economically manufacture name badges with a comparatively high stiffness, it is proposed that they are produced as one-part injection moulded components, each with a curved front part (1) and a similarly curved rear part (2), which is connected to the front part (1) by pivot bearings (4) and both the front part (1) and the rear part (2) are provided with circumferential ridges (6, 7) which are orientated in the same direction when the front and rear parts (1, 2) are in the closed state.
