Abstract (en)
A container (2) (50) (90), which finds particular application as a container for elongate smoking articles such as cigarettes, has a flat wall, a substantially opposed curved wall and a cross section consisting of a curved portion and a straight portion between the ends of the curved portion, and comprises: a shell (4)(52)(92); and a receptacle (6)(54)(94) within the shell and having an opening therein. The receptacle (6) (54) (94) is moveable between a closed position, in which the opening of the receptacle (6) (54) (94) is covered by the shell, and an open position in which the receptacle (6)(54)(94) projects from the shell (4) (52) (92) at least partially exposing the opening. The receptacle (6) is preferably mounted within the shell (4) for rotational movement relative thereto (6) between the closed position and the open position.
