Abstract (en)
[origin: DE202006018310U1] The closure comprises two elements of which one (1) is fixedly connected to the window and the other (2) is designed to fold down. The two elements are connected to one another through a double hinge (3). A metal plate (4) on the second element engages over the first element when the closure is closed. The first element has bores (8) for fixing the closure on the window. A third bore (7) allows the window to be opened.
