Abstract (en)  
[origin: EP1927716A2] The facade has facade units (3) including an element frame (1), an infill and a glazing unit (2) arranged on the element frame. The infill and the glazing unit are provided with connecting bars (4) detachably connectable at the element frame. The connecting bars are designed as a frame, and glued on the infill and the glazing unit. The connecting bars are provided with a profile projection (9) that protrudes into a receiving groove (10) at the element frame in a form fit manner. An independent claim is also included for a method for mounting a facade unit for a facade during an element construction process.
