Abstract (en)

[origin: EP1928058A1] The terminal e.g. single electrical terminal (10), has an elastic pressure unit i.e. U-shape prestressed metallic spring blade, pressurizing electrical conductors (1, 4) against a metallic body (20) i.e. embossed plate, that is in form of a staircase. Engaging pipes (14, 19) engage the conductors between the body and the unit. An elongated disconnecting lever (11) is supported on the unit by a body's spacer. The pipe traverses the lever, for opening against an opening of a transversal lower panel of the body and on an upper surface of the lever, where the lever is made of insulating material. An independent claim is also included for an electrical connector comprising a base made of insulating material.
