Abstract (en)

[origin: WO2007034109A1] The invention concerns an assembly for fixing an element (2) in a motor vehicle passenger compartment, said assembly comprising a rail (3) and a device for removably fixing (4) the element (2), the position of said fixing element being adjustable in longitudinal translation in said rail, said fixing device including means for fixing (8) the element (2), the device (4) including means for stopping (10) the translation of the device (4), said means being mobile in rotation relative to the rail (3) between an adjusting position, wherein the device can move in translation relative to the rail (3), and a stopped position, wherein the device (4) is secured to the rail (3), said device further comprising means for locking (13) the rotation of said stop means when it is in its stopped position.
