Abstract (en)

[origin: DE102005047427B3] The device has a housing (1) with a fixed, downward opened channel (3) for filtering a container (P). A medium distribution area (3') is downwardly provided with recesses and is provided in an outer area of the channel in each handling area (6, 7, 8). Distributed mediums are coupled above the container with a transport device, where the container is stressed by a processing medium in the handling areas.
