Abstract (en)

[origin: US2007062966A1] A pack of wipes including multiple wipes arranged in a stack and an external envelope enclosing the stack. The external envelope includes a dispensing orifice and the wipes are folded so as to include a leading panel, a central panel, a trailing panel, a leading fold and a trailing fold, wherein the leading fold separates the leading panel from the central panel and the trailing fold separates the central panel from the trailing panel. The stack has a first wipe and a second wipe. The first wipe is placed closest to the dispensing orifice and the second wipe is positioned next to the first wipe in the stack, wherein the removal of the first wipe through the dispensing orifice induces a portion of the central panel of the second wipe and a portion of the leading panel of the second wipe to protrude from the dispensing orifice and to stay in contact to each other.
