Abstract (en)

[origin: WO2007028880A1] The invention concerns a shutter stop (1) comprising an apron with articulated slats (4) which are unwound in an opening and wound into a casing on the edge of the opening, the stop (1) being fixed in a hole (6) provided on one slat of the apron. The stop (1) comprises two pre-assembled elements: a first element (7) including a click-stop means (8) in the hole (6) of the apron and first linking means (9); a second element (10) including linking means (11a) matching the first (8) enabling the two elements (7, 10) to be pre-assembled, and locking means (12, 15) co-operating with the click-stop means (8) to prevent it from being unlocked relative to the apron when the two elements (7, 10) have been assembled, the assembly being such that the only access on one side of the apron is required for said stop (1) to be mounted and fixed.
