Abstract (en)
[origin: WO2007033942A1] The invention relates to a cooking appliance which is mounted in an elevated manner, comprising at least one muffler which defines a cooking chamber and which comprises a muffler opening on the base side thereof, a base door, which can be displaced, for closing the muffler opening and which comprises at least one heating field on the upper side thereof, having at least one operational state for the open state of the base door and at least one operational state for the closed state of base door. Only one operational state, which is relevant for the opening state of the base door, can be activated, and only one operational state for the open state when the base door is open and only one operational state for the closed state when the base door is closed.
