Abstract (en)
[origin: WO2007031427A1] The invention relates to a cooling device comprising a heat-insulating housing (1, 2) which surrounds an inner chamber (7,8) and which comprises a solid outer wall (3), a solid inner wall (4) and an insulating material layer (5) which is integrated between said walls, in addition to a water drain which extends through the two walls (3, 4) and the insulating material layer (5). Said invention is characterised in that the water drain comprises a pipe (14) which extends through an opening of at least one of the walls (3, 4), and that the edge of the opening engages in a peripheral groove of the pipe.
