Abstract (en)

[origin: US2007047895A1] An enclosure includes a closable housing defining an internal cavity, the housing having an open position and a closed position. A pivot tray is mounted within the internal cavity of the housing and is pivotable between a secured position and an unsecured position when the housing is in the open position. In the secured position, the tray defines a first compartment on a first side of the tray and a second compartment on a second side of the tray. Only the second compartment is accessible when the housing is in the open position and the pivot tray is in the secured position.
