Abstract (en)

[origin: WO2007084870A2] Systems and methods have been developed for manipulating media assets in a networked computing environment where processing power, bandwidth and/or storage capacity may be limited. More specifically, systems and methods have been developed whereby low-resolution media assets may be created that are optimized for transfer over low bandwidth networks and for editing and manipulation in an environment with low processing power and low storage capacity, and a high-resolution media asset may be created for playback.
