Abstract (en)

[origin: FR2891395A1] The module (1) has two pairs of mobile contacts (6a, 6a', 6b, 6b') mounted in rotation around a rotation axis (A) and coupled by a rotation driving mechanism (7). The driving mechanism is arranged for inversing rotation direction of one pair with respect to the other pair so that in interlocked position current circulates from an upstream fixed contact (4a) to a downstream fixed contact (4b) in describing a crossed loop (B).
