Abstract (en)  
[origin: WO2007036282A1] The invention proposes an electrical switching device, comprising a contact lever (13), which is mounted approximately centrally such that it can rotate, wherein a movable contact piece (12) is arranged at the free end of the first arm (15), and the free end of the second arm (16) is coupled to a rotatable toggle switch (22). A contact pressure spring (18) acts on the free end of the first arm (15) approximately in the direction of the longitudinal extent of the contact lever (13). An actuator (19) is provided which acts on the contact lever (13) so as to open it in the region between the axis of rotation (14) of the contact lever (13) and the moveable contact piece (16) and which may be mechanically coupled to the moveable contact lever (13) or the moveable contact piece (16).
