Abstract (en)
[origin: WO2007039250A1] The invention relates to a contact for contacting a contact with a contact arrangement. The contact arrangement has four spring contacts. A spring contact has two contact points arranged one behind the other, the contact points projecting inwards towards a contact region. The four spring contacts are arranged in such a way that the four spring contacts encompass the contact region on four sides and the contact points of the spring contacts are arranged in two contact planes one behind the other, each spring contact having one contact point in each plane. This embodiment and arrangement of the spring contact enable improved contacting.
