Abstract (en)
[origin: EP1929922A1] The present invention deals with a dishwasher comprising a tub (2) for receiving at least one object that is to be washed, wherein the tub (2) has a tub bottom (7) that is downwardly inclined from a first portion of the tub (2) close to a first side (6) of the tub towards a second portion of the tub (2) close to a second side (5) of the tub, which second side is opposite to the first side, such that a distance (D) between the tub bottom (7) and a plane comprising an upper edge (11) of the tub increases towards the second portion of the tub. Thereby, it will be possible to receive large items in the tub, such as plates with a large diameter, without increasing the total height of the dishwasher. The invention is especially advantageous in drawer dishwashers, and when the tub bottom (7) is downwardly inclined from a front portion of the tub towards a rear portion of the tub.
