Abstract (en)

[origin: WO2004085158A2] The invention relates to a device and a method for storing at least two blankets that are drawn off from the same cylinder of a printing machine one after the other. The invention is characterized in that the blankets are drawn off from the cylinder preferably in a tangential relation one after the other and are stored or are being stored at an angle of inclination of not more than 15 DEG relative to a horizontal. The blanket drawn off after a preceding blanket is stored or is being stored below the blanket previously drawn off at a distance that is vertical along its length.
