Abstract (en)

[origin: EP1930271A1] The device has four pairs of rollers forming a folding mechanism that is accommodated as a module in a base body, whereby a second roller (30) is arranged vertically above a fourth roller (60) in one half of the module and first, third and fifth rollers (28, 52, 68) arranged one above the other in the other half. The module is divisible along a vertical dividing plane between both halves of the module.
