Abstract (en)

[origin: EP1930284A1] The device has a stiff plate element (1) with two edge regions (1.1, 1.2) for resting on two wall surfaces (10.3, 20.4) of plate-shaped wall elements (10, 20), and a middle region (1.3) connecting the regions. Another stiff plate element (2) includes a middle region (2.1) connecting third and fourth edge regions (2.3, 2.4). Tightening elements tighten the middle regions relative to one another in a direction, such that one of the wall elements is clamped between the edge regions (1.1, 2.3) and the other wall element is clamped between the edge regions (1.2, 2.4) in a tightened state. An independent claim is also included for a method for connecting two wall elements.
