Abstract (en)

[origin: EP1930489A1] The warp pattern warping machine, with a warping drum (1) with movable transporting surfaces (2) arranged on the circumference of the drum, thread guides (14) arranged on a thread guide carrier (15), and a creel (7) from which the thread guide draws threads, has the warping drum and the thread guide carrier movable in relation to each other in the axial direction. The thread guide carrier and the creel are interconnected in the axial direction, wherein the warping drum and the creel are movable in relation to each other in the axial direction. An independent claim is included for a method for producing a warp pattern in which the warping drum and the thread guide carrier are moved in the axial direction in relation to each other.
