Abstract (en)
[origin: EP1930539A2] A sunscreen for a building facade is attached by two screw fixtures (28) to a frame (10) consisting of upright and horizontal members. Each fixture has an upwards-directed locating aperture (32) to receive the screen attachment (46) insert (50). The inlet and insert allow for no relative movement in one direction parallel upright with the facade, but do allow for relative movement in the direction parallel horizontally to the facade.
