Abstract (en)

[origin: EP1930724A1] An object of the present invention is to provide a various-substance holder, a various-substance holder treating apparatus, and a various-substance holder treating method which enable the mutual identification of a plurality of particulate carriers to which various substances are or can be immobilized without the need to arrange the particulate carriers at predetermined positions or in a predetermined order, eliminating the need for time and effort to arrange the various substance at predetermined positions or in a predetermined order to allow treatments to be quickly and easily achieved. The various-substance holder according to the present invention has a plurality of particulate carriers or plural sets of particulate carriers to which plural types of chemical substances are or can be immobilized and a carrier holding portion holding the plurality of particulate carriers or the plural sets of particulate carriers in a substantially stationary state such that the plurality of particulate carriers or the plural sets of particulate carriers can be externally measured. The various-substance holder is configured so that each of the plurality of particulate carriers or at least one of the particulate carriers belonging to the plural sets of the particulate carriers are labeled according to types of the chemical substances or for each of the particulate carriers or each set of the particulate carriers so as to be mutually identifiable before the particulate carriers are introduced and held in the carrier holding portion.
