Abstract (en)

[origin: EP1930862A1] Method for controlling a traffic signaling device comprises determining an accident, establishing the accident time point and securing operational states of the traffic signaling device. Independent claims are also included for the following: (1) Control device for a traffic signaling device; (2) Computer program for controlling the traffic signaling device. Preferred Features: The acquisition of the accident is determined using accident information transmitted from the vehicle in the accident. Transfer of the accident information is triggered by activating a sensor or manual device.
