Abstract (en)
[origin: WO2007039541A1] The invention relates to a retracting device, in particular for drawers, comprising a housing (2) on which a driver (3) is guided, wherein said driver (3) is movable from a drawing-in to a parking position against a spring force and is coupled to a closable furniture part for holding it in the closed position thereof. According to said invention, the driver (3) is prestressed in the drawing-in position by means of at least two springs (6, 7, 16) which are coupled therebetween by means of a connecting part (9, 9', 90). The use of individual springs (6, 7, 16) makes it possible to obtain an important spring path for a compact structure.
