Abstract (en)  
[origin: WO2007042714A1] The invention concerns a grommet (O) of the type consisting of two half-shells (100 and 200) assembled by clipping used as edging and/or reinforcement of perforations in curtains, textiles or like materials, the two half-shells (100 and 200) being urged into engagement by clipping, one of the two half-shells (100 and 200) comprising a plurality of pins (120) projecting from its surface facing inward of the other half-shell (200) and the tips (121) of which are inserted into a circular annular groove (200) provided therefor in the inner surface of the other half-shell (200). Said grommet is in particular characterized in that said pins (120) comprise a body having a polygonal cross-section. The invention is applicable as reinforcement and edging of perforations and holes produced in any material.
