Abstract (en)  
[origin: WO2007022996A2] The invention relates to a method for planning a surgical intervention on a body part, in particular on a patient jaw consisting in defining a common reference system between a set of patient data which is recorded by means of a recording unit and represents said three-dimensional body part and a body part model to be registered, in holding the patient body part in a fixing device (3) during acquisition of the patient data, in placing the fixing device in a defined position with respect to the recording device, after recording the patient data, in placing a model (7) into a corresponding position in the fixing device (3) by means of a holder (8) which is positioned in a defined manner with respect to the fixing device, in fixing the model (7) to the holder (8) in said defined position and in carrying out the other planned steps on the model (7) fixed to the holder (8).
