Abstract (en)

[origin: WO2007031863A1] A set comprises at least one first device comprising at least one liquid reservoir and at least one liquid projectile launching mechanism. When, acutated by the user, the liquid projectile launching mechanism draws a portion of the liquid from the reservoir and launches this portion of liquid outward from the first device. The first device may be designed to be carried by a user or otherwise supported by a user's body. The set further comprises at least one second device comprising a liquid reactive material.
