Abstract (en)

A radio communication system (1) comprising a system computer (3) connected to a radio communication device (2) provided with a radio communication antenna (11) and an audio management system (4) via a data bus (7), the audio management system (4) being connected to a user communication device (5). The system computer (3) is arranged to switch between a data communication service and a voice communication service upon receiving a signal from the radio communication device (2) indicating that a carrier on a predetermined fixed frequency has been detected or has ceased to be detected by said radio communication device (2), or from the audio management system (4) indicating that a request for a predetermined fixed frequency voice communication service has been detected or has ceased to be detected by said audio management system (4).
