Abstract (en)

[origin: EP1933211A1] The timepiece has a time-setting mechanism (16) with a time-setting lever (30) pivoting between angular rest and time-setting positions. The lever (30) controls pivoting of a pull-out piece (50) between winding and time-setting positions. A locking lever (24) cooperates with a release lever (60) of a striking mechanism (20). A hooking arm (88) causes the lever (24) to pivot to locked striking work position. The lever (24) has a striking work locking hook (74) cooperating with a complementary unit to prevent release of striking work in work position.
