Abstract (en)

[origin: EP1933291A1] A memory (104) stores an individual priority identification signal (105) for a vehicle. A receiver (106) picks up a wireless external signal (118) with an external priority identification signal (120). A device (108) for comparing priorities compares whether the external priority identification signal flags a priority higher than the individual priority identification signal. An independent claim is also included for a method for traffic control between a first vehicle and a second vehicle.
