Abstract (en)  
[origin: EP1933345A1] The control unit (1) has a control shaft which can be rotated about a control axis in order to operate a movable contact of the electrical switching device; a blocking mechanism for the control shaft, to be activated in order to block a rotary movement of the control shaft in a first rotation direction. The blocking mechanism is activated by an activation mechanism. An independent claim is also included for a locking system for locking an access for an electrical switching device.
