Abstract (en)  
[origin: EP1933592A1] The apparatus has a memory (13) for storing data, and a transmission facility providing wireless communication. The transmission facility emits activation energy for an external transponder (11) and receives data from the transponder in order to program the apparatus. The data received by way of the transmission facility is stored in the memory. The external transponder is passive and the energy for a data transmission exclusively originates from the apparatus with the aid of the transmission facility. Independent claims are also included for the following: (1) a hearing system comprising a hearing apparatus (2) a method for programming a hearing apparatus.
