Abstract (en)  
[origin: WO2006127560A2] A package assembly for a multi-layer center-filled chewing gum is disclosed. The package assembly supports individual gum pieces that have a center surrounded by a gum region. The gum region may include a gum base. Optionally, the individual gum pieces may be further coated with an external coating layer. Components of the individual gum pieces create a duality, such as a dual sensation perception, that are identified by indicia on the package.
