Abstract (en)
[origin: DE102005047073A1] The cleaner has a centrifugal force separator (5) through which the dust is separated from dust-loaded air in a dust collecting container (6) removable from the centrifugal force separator. The purified air is delivered into the environment via a low pressure chamber (9). The centrifugal force separator and the dust collecting container are arranged in a housing between a vacuum cleaner cover (2) and a vacuum cleaner lower part (1). The centrifugal force separator (5) is fixed at the vacuum cleaner cover.
