Abstract (en)

[origin: WO2007045740A1] The invention concerns a tie-in harness made from a creeling structure (120) consisting of an aerated double texture (13) comprising a first inner comfort layer superimposed to a second abrasion-resistant outer layer, and reinforcing means including an intermediate preform (17B) of higher rigidity inserted and bonded between the first and second layers by the bias bindings (18). Such a texture enable the mechanical strength and the comfort of the harness to be enhanced.
