Abstract (en)

[origin: WO2006126976A1] The invention relates to devices for training the sportsmen, in particular, those engaged in soccer, volleyball, lawn-tennis etc. The device intended for location on soccer field-type training site area, comprises a target to be hit by soccer balls and situated on the line of target- disposition; a screen for stopping the kicked soccer balls; a ramp situated between the screen and the training site area, whose front surface gradually ascends from the training site toward the screen and turns in its rear wall; a trough between the screen and the rear wall of the ramp; a means to convey soccer balls captured within the trough to at least one point of delivery hereof; wherein the screen for stopping the soccer balls is provided as a generally vertical netting fixed to a system of posts, which netting is generally intercepting any possible trajectory of soccer balls at kickers' efforts to hit the target herewith. If quantity of soccer balls involved in a training-session is sufficient, the player may be "center fired" upon by the soccer balls during any desired period, and practically in non-stop regime. Neither coach nor player will need to pay one's time or effort to collect soccer balls scattered over the field, to load them into ball-throwers' depots.
