Abstract (en)

[origin: DE102005046767A1] In a process to form a cylindrical housing for an automotive catalytic converter, a sheet steel panel is rolled into a tube and welded (12) along one edge. The tube is then orientated with the weld seam in a given presentation, and the tube inner diameter calibrated under the dimensional correction of externally applied press blocks (24). The weld seam is located under a block.
