Abstract (en)  
[origin: DE102005049411B3] The knife has an operation lug (14), held outside of blade bolt (19) at a base plate. Inner surfaces, arranged in a receiving channel and adjacent to a blade holder (12), hold the bolt in its closed position close to the base plate. The inner surfaces release the bolt to open the bolt and to take out the knife blade, when the bolt is shifted forward and outwards in a blade change opening through a knife blade passage opening.
