Abstract (en)

[origin: WO2007119099A2] A dispenser head for use with a plurality of containers, each of the containers having a hollow stem through which contents are dispensed when the stem is activated, includes (a) a flow guide structured and positioned to receive a plurality of pressurized containers; (b) a plurality of flow conduits disposed within the flow guide, each of the plurality of flow conduits comprising an inlet and an outlet and each said inlet capable of engagement with a respective container stem; and (c) an actuator connected to the flow guide, wherein the actuator is structured and positioned to allow simultaneous flow communication between each of the plurality of flow conduits and a respective hollow stem, allowing substantially contemporaneously dispensing and/or combining of the content from a plurality of containers.
