Abstract (en)

[origin: WO2007042087A1] The invention relates to a thread draw-off device for a textile machine producing cross-wound bobbins, comprising a thread draw-off roller that can be driven by an individual motor and an associated pressure roller which is driven via frictional engagement. The thread draw-off roller (10) is provided with an axially symmetrical basic member (15) which is embodied such that an air flow cooling the drive unit (13) of the thread draw-off roller is generated when the thread draw-off roller (10) rotates.
