Abstract (en)
[origin: WO2007042100A1] The invention relates to a sanitary installation part (1) which has an installation housing (2) which can be inserted into a housing mount of a gas line or liquid line and has at least one latching means which projects into a latching position on the outer circumference of the housing and can be moved in a resiliently elastic manner from this latching position into a zero position. The installation part according to the invention is characterized in that at least one latching means is designed as a latching protuberance (5) which is bevelled or rounded along its transverse edges oriented transversely to the insertion direction on both sides, and in that the at least one latching protuberance (5), in its zero position, can be resiliently fitted into a latching-means mount, in which the latching protuberance (5) is incorporated in the outer circumference of the installation housing (2).
