Abstract (en)
[origin: WO2007042665A1] The invention concerns a shelter comprising a support structure and a fabric (7) covering at least partly an area located inside the structure, wherein the support structure includes a lateral framework (1) comprising a plurality of vertical poles (1a, 1b) and a closed horizontal band (4) whereby each pole is associated with its neighbors, to counter the centripetal forces to which the framework (1) is subjected and central means (6) for fastening the fabric maintained at a height by radial wire cables (5a, 5b) derived from the framework, the fabric being radially maintained between said central means and the peripheral framework.
